

Gmail Tip #61: Enhancement: Attachment Size Doubled to 20MB!

Gmail announced today that it has doubled the allowable size for attachments from 10MB to 20MB. Now you can start sharing more of your home videos, large presentations, and files! Note that because of the way email attachments are encoded, the maximum size of the file you send (which can vary from file to file) may be actually less than 20MB.
