

iPod Touch Review: Belkin Silicone Skin Case

Belkin Silicone Case

Iâ??m always looking for decent cases for the devices I carry, and I have found another case for the iPod Touch that I just love. The Belkin Silicone Skin Case is a molded case made of silicone rubber that stretches to fit snugly around the iPod Touch. It provides cut-outs for the screen, top power button, brightness sensor, Universal Connector, and headphones. There is also a recessed portion over the front Home button giving it a great look and nice tactile feel. The case nicely protects the chrome back from scratches, and it provides the iPod Touch with a great grip. It only adds just a fraction of an inch to the overall size, so your iPod Touch remains slim and sleek.

This case is simple, yet elegant in design, but like similar â??skinâ?• cases it does not provide any protection for the screen, so a modest screen protector is included. (I personally use some left-over Palm PDA screen protectors, though the supplied protector will work just fine.) This setup makes the iPodtTouch very â??front-pocketebleâ?•, and I am much more likely to regularly carry it with me because of the small size and confidence in the protection. After all, whatâ??s the point of having a device that contains your favorite content if it is too bulky to take with you? Currently, this is my case of choice.
